In the Claims:

Please add new claims 29-37; and amend claims 1-3, 10 and 15 in the following manner:

1. (Once Amended) A door for at least partially covering a doorway in a wall and being able to recover from an impact, comprising:
 - a resilient core;
 - a flexible covering that at least partially covers the resilient core to comprise a first door panel having a relaxed shape disposed along a plane, the first door panel being at least thickness compressible and further being [wherein the first door panel is] able to substantially recover its relaxed shape after [the] an impact causes appreciable distortion in the first door panel, [and] the first door panel [is] being further able to transmit in a direction within the plane a compressive load [and do so] having a magnitude below a first threshold without appreciable distortion to the first door panel; and
 - an actuation system coupled to the first door panel to render the first door panel moveable laterally to the doorway between a doorway
